

Motic Trace

Comparison Software

Motic Trace is a software tool that helps turn any two microscopes into forensic comparison units.

Description

Motic Trace is the software everyone has been waiting for. **There is no need to buy expensive comparison microscopes.** Simply connect two or more Moticams or Motic Digital Microscopes to your computer and get immediate live comparison imaging. **Turn your existing microscopes into comparison scopes** and break into forensic science teaching without breaking the bank.

Motic Trace will go further than existing Comparison Microscopes dare to go. Don't just compare images side by side. With this software you can overlay several live images, resize and independently rotate each of them. Match two fingerprints with ease from live images or recall from a saved set. Check handwriting authenticity in a matter of seconds or determine whether two pieces of fabric belong to the same set. **Don't settle for expensive old technology, go Digital.**

Specifications

Motic Trace is a software solution, please check the minimum hardware requirements of your Digital Microscopes or Moticam cameras. Please note that if you are running two or more of our High-Resolution live imaging solutions -for example 2.0MP- your computer should be suitably equipped with at least 512MB RAM and 64MB Display Memory. When you purchase Motic Trace, you will also be able to unlock comparison features in our Motic Images 2.0 for OSX therefore providing Macintosh OSX users the same powerful tools.

Features

Did you know that you may already have the potential for Comparison Microscopy in your School? If you own one or more Moticams or **any brand Digital Microscope**, as long as they were originally shipped with **Motic** branded Software, you can use **Motic Trace** together with your existing hardware.
