

Input Adapters

For DCR® Series and ACE® Series Light Sources.

SCHOTT provides a series of adapter bushings which fit into the DCR® series and ACE® series light sources. The corresponding ferrule sizes they will accept, are shown below. The bushing attaches to the fiber bundle ferrule with a set screw. The bundle is then inserted into the light source receptacle. These adapters guarantee proper fiber bundle positioning in the focal plane of the lamp to receive the maximum light output.
