

MultiBurner

Multiple DVD Burner

Compatible with AfterBurner

Burning evidence made easier!

-  AfterBurner compatible DVD Burning Station
-  Saves time, burns up to 7 DVDs without operator intervention
-  Can be deployed with AfterBurner
-  12 Volt DC Powered, suitable for battery operation
-  Ideal for long-term surveillance

MultiBurner is a multiple DVD burning station that is capable of burning up to seven AfterBurner disks unattended and is ideal for long-term surveillance operations.

Saves Time

Burning disks containing evidence gathered can be time consuming. MultiBurner compliments AfterBurner and will save operator time by allowing up to seven DVDs to be burnt without the need to constantly remove and reload disks.

Automatic Burning

MultiBurner is easy to connect to the AfterBurner via a ribbon cable which is supplied with the unit. When the disks are loaded and the units connected, MultiBurner will automatically burn data gathered from AfterBurner's hard drive.

Flexible Burning Station

A single MultiBurner can be used back at base to speed-up the download of evidence gathered from a number of AfterBurners returned from the field. Alternatively, MultiBurner can be deployed alongside an AfterBurner where up to 8 DVDs will be automatically burnt without the need for intervention. When the user returns they will have a set of burnt disks ready for analysis.
